Ethernet Traffic: Standard Features

Note that the maximum modem IP throughput depends on traffic format and the features enabled. Bridged IP data can be processed up to the modem maximum data rate. Please seek assistance from Teledyne Paradise Datacom in evaluating your particular requirements.

Bridging and Static Routing	Bridging Static routing
IPv4/IPv6	Dual IPV4/IPV6 TCP/IP stack allowing use of both IPv4 and IPv6 addresses for bridging and routing of traffic
VLAN Support	IEEE 802.1q VLAN support IEEE 802.1p Quality of Service (packet prioritisation) using strict priority or fair weighting queuing
DHCP, SNMP	DHCP (standard) for automatic allocation of M&C IP address. SNMP (standard) v1, v2c and v3
Web Server	Embedded web server M&C interface (standard)
IP Diagnostic Graphs	Shows Tx, Rx throughput (bps, pps); dropped, errored packet counts (standard)

Ethernet Traffic: XStream IP™ Option

XStream IP™ is an integrated set of IP optimization and traffic management features designed for maximum reliability and bandwidth efficiency.

Traffic Shaping	Provides guaranteed throughput levels for IP streams, using Committed Information Rate and Burst Information Rate settings. Stream differentiation is by IP address, IEEE 802.1p priority class, Diffserv DSCP class or MPLS EXP field
